- 1 Building task-specific interfaces to high volume conversational data 52%  
 Loren G. Terveen , William C. Hill , Brian Amento , David McDonald , Josh Creter  
**Proceedings of the SIGCHI conference on Human factors in computing systems**  
 March 1997
- 2 World Wide Web: Using navigation data to improve IR functions in the 21%  
 context of web search  
 Mark H. Hansen , Elizabeth Shriver  
**Proceedings of the tenth international conference on Information and knowledge management** October 2001  
 As part of the process of delivering content, devices like proxies and gateways log valuable information about the activities and navigation patterns of users on the Web. In this study, we consider how this navigation data can be used to improve Web search. A query posted to a search engine together with the set of pages accessed during a search task is known as a *search session*. We develop a mixture model for the observed set of search sessions, and propose variants of the classical EM a ...
- 3 Strategic directions in electronic commerce and digital libraries: towards 14%  
 a digital agora  
 Nabil Adam , Yelena Yesha  
**ACM Computing Surveys (CSUR)** December 1996  
 Volume 28 Issue 4
- 4 SIFTER-II: a heterogeneous agent society for information filtering 6%  
 Rajeev R. Raje , Mingyong Qiao , Snehasis Mukhopadhyay  
**Proceedings of the 2001 ACM symposium on Applied computing** March 2001

**5** Personal ontologies for web navigation Jason Chaffee , Susan Gauch**Proceedings of the ninth international conference on Information and knowledge management** November 2000**6** Indexing and retrieval of scientific literature

2%

 Steve Lawrence , Kurt Bollacker , C. Lee Giles**Proceedings of the eighth international conference on Information and knowledge management** November 1999

The web has greatly improved access to scientific literature. However, scientific articles on the web are largely disorganized, with research articles being spread across archive sites, institution sites, journal sites, and researcher homepages. No index covers all of the available literature, and the major web search engines typically do not index the content of Postscript/PDF documents at all. This paper discusses the creation of digital libraries of scientific literature on the web, incl ...

**7** Structured hypertext with domain semantics

2%

 Weigang Wang , Roy Rada**ACM Transactions on Information Systems (TOIS)** October 1998  
Volume 16 Issue 4

One important facet of current hypertext research involves using knowledge-based techniques to develop and maintain document structures. A semantic net is one such technique. However, most semantic-net-based hypertext systems leave the linking consistency of the net to individual users. Users without guidance may accidentally introduce structural and relational inconsistencies in the semantic nets. The relational inconsistency hinders the creation of domain information models. The structura ...
